

## COVID-19 Data Term Definitions

### Protecting Against COVID-19

Term	Definition
County	County of residence
Sex	Sex
Age Range	Age range
Onset Date	Date the illness began. If onset date is unknown, the date associated with the case is used as a substitute for the date of illness onset.
Date of Death	Date of death. If date of death is unknown, this variable will be listed as "Unknown."
Admission Date	Date of hospital admission. If the date is unknown, it will be listed as "Unknown."
Case Count	Total number of cases that meet the demographic criteria specified in the corresponding row. For example, the number in this cell is the total number of cases in a county, of the given gender, age range, onset date, etc. Each individual is only counted once. This includes both Confirmed or CDC Expanded Case Definition (Probable).
Death Due to Illness Count	Total number of deaths due to illness that meet the criteria in the given row. Each individual is counted once in this dataset.
Hospitalized Count	Sum of hospitalizations that meet the criteria in the given row. Each individual is only counted once in this dataset. Data in this cell is cumulative and not the amount of people that are currently hospitalized.
